which may have worked at Wright Field is really valid insofar as the objectives of this paper are concerned. Even though I cannot evaluate the proposed methodology here, I do think the significance of this problem could certainly warrant an intelligent expenditure of the proposed amount of money.

Chuck:

I am returning the research proposal forwarded from NSF on Quantitative Evaluation of S&T Documents. As I told you on the telephone, I think there could be little question but that the objective that this proposal purports to treat is a very meritorious one. Similarly, I feel that the procedural approach which has been paralleled with the older Wright Field methodology of the late 30's makes a certain amount of sense. I am not quite sure, however, that the parallel between the procedure
